

Stillhouse Road Widening City of Paris, Texas

The purpose of this project was to provide improved access to North Lamar ISD campus. The widening of Stillhouse Road created a center turn lane to assist traffic flow during the congested periods when students were being delivered to and picked-up from school.

The improvements widened the west side of Stillhouse Road from Levi Lane to Lewis Lane, made improvements to the storm drainage, and widened a section of roadway at the south end near Loop 286.

The City of Paris performed construction review services and warranty review for this project.

Services provided by Hayter Engineering are listed at right.

The project was completed in 2011.
