

**Texas Department of Agriculture
Clarifier, Headworks, and Sludge Pump Station
City of Edgewood, TX
Project ID: GR710899**

The City of Edgewood was experiencing mechanical problems at its wastewater treatment plant with the only clarifier. It was also experiencing problems meeting the discharge permit limitations due to excessive grit entering the plan, sludge accumulation in the aeration basins, and poor removal of rags and other debris in the influent.

The project consisted of a new clarifier mechanism, removal of sludge from the aeration basin, a new barscreen, new grit removal system, and a new scum return pump station.

Services provided by Hayter Engineering are list to the right.

The project was completed in 2012.
