

**Texas Department of Agriculture  
Water and Wastewater Treatment Plant  
Enhancements  
City of Commerce, Texas  
Project ID: 711131**

The wastewater treatment plant portion of this project (photos in the left column) installed new adjustable weir gates on the flow equalization basins, installed new flow meters, and installed some new float switches in the sump of the existing screw pumps.

The water treatment plant portion of this project (photos in the right column) removed and replaced the existing deteriorated backwash troughs. New brass weirs were also installed.

The time line was extremely short to attain approval to proceed with the concept, design, bid, award, and construction of the project. Fortunately, the project was completed on time and the owner was able to use all of the grant funds from the original project.

Services provided by Hayter Engineering are listed at right.

This project was completed in 2013.
